

Generator – NEMMCO Registration – Independent Witness Service

Sigma Energy Solutions (Sigma) can provide independent verification to NEMMCO on behalf of a generator owner, regarding the relevance and compliance of the owner's application to NEMMCO for registration of its generator.

With the advent of the National Electricity Code, NEMMCO and the interconnection of state electricity networks, new generator owners are faced with new requirements. NEMMCO requires that the relevance and compliance of applications for registration of generators be independently witnessed.

Sigma has the skill and experience to provide a reliable verification of the relevance and compliance of the technical details included in an owner's application to NEMMCO for registration of its generator.

As part of this process Sigma will:

- Review relevant technical aspects of the owner's generating plant "as designed" or "as built"
- Review relevant technical aspects of the owner's connection agreement with its network service provider
- Review the owner's schedule of technical requirements supporting the owner's application for registration with NEMMCO in respect of;
 - Relevance of the technical requirements
 - Compliance or otherwise of the National Electricity Code (Australia)
 - Compliance or otherwise of the connection agreement
- Provide a letter to NEMMCO under Sigma Energy Solutions letterhead verifying the results of the review.

Advantages of using Sigma Energy Solutions

Sigma staff have a good working knowledge of the National Electricity Code (Australia) and the requirements of NEMMCO with respect to registration of generators.

Sigma has a range of experienced electrical engineering staff able to address the diverse issues involved.

Sigma has provided similar services for co-generation plant and renewable energy generating plant owners.

Sigma has been recognised by NEMMCO as an independent witness for owner's applications for generator registration.
